## Facebook app for android not working

Microsoft Launcher Google Now Apex We have selected three great android launcher alternatives to check out. Microsoft Launcher is a clean and clutter-free solution, with an emphasis on a stylish look and a convenient button that you press to change your wallpapers using carefully selected daily Bing photos. It comes with a neat sidebar where you get tons of useful widgets: latest and popular contacts, settings reminders, weather alerts and so on. The arrow also has a swipe up from the bottom gesture that brings menus like Control Center on iPhone, which is definitely useful (but this particular launcher element tends to stutter on some phones). Google Now Launcher is probably the best way to get the time and contemporary look of Android as Google sees itself. With the latest update, Google Now Launcher allows you to normalize the size of icons, so there are no more huge icons contrasting with much finer ones, and even allows you to use your phone in landscape mode (which we think is amazing). Apex Launcher has long been an alternative to Nova Launcher, offering a similar level of depth and personalization. Pixel Belle Delta Polycon Take it iPhone users - you can change your icons to Android! If you're already using a custom launcher, you can download one of the many icon packs available in the Play Store (most of which are free or cost \$100). We love the Pixel Icon Pack, which brings cool Android Nougat visuals to your device, and we've given three of our recent favorites to check out, but feel free to explore the Play Store and find the one that best suits your style. Wallpapers by Google Museums Wonderwall Unfortunately, most phones these days do not come with almost enough customization options out of the box, and often the choice of wallpapers built on the phone is very limited. Fortunately, there are several killer wallpaper apps for Android that can really make your screen come to life and feel... Personal. Google Wallpaper is one of the best options featuring a selection of trendy wallpapers (including a catchy satellite view of our beautiful planet Earth) that the app will rotate every day. Then we have Muzei, developed by Google engineer Roman Nurik. Muzei has recently been updated to add integration with drop-down notification icons in Android 7 Nougat, and is now more stable. The application allows you to set a small dilution on the wallpaper, so that the image does not distract from the application. In this way, you get a gradient look that sets the mood, but does not distract. Last but not least, we have Wallp, an app that has amassed all the stock wallpapers from various popular (and not so popular) phones. Needless to say, these are very high quality wallpapers that are worth checking out. Zooper Zooper Widget provides one of the best options in Customizable widgets: You can match widgets to any wallpaper and style, as it's easy to choose different backgrounds, fonts and styles clock, calendar, time, weather and some other information that are widget-able. Another great widget app out there is KWGT, and both of these solutions come with lots of add-ons and extensions that will make your device unique and more functional through some creative widgets. Google Photos Google Photos Brings a small revolution in image storage and sharing - it comes with unlimited cloud storage for images up to 16 megapixels (and you can opt for smaller sizes and very slightly compress larger photos) and videos up to 1080p. It also makes sharing photos and albums extremely easy and works just as well on all platforms: iOS, Android, internet and literally everything else with your browser. Finally, it also has a brilliant new selection option that lets you drag your finger and use it like a computer mouse. Quite magically, it also allows you to search for (and actually find) images by simply typing a few words such as animals that will filter all animal images in your photo collection. Magic Google Photos is probably the most excellent app for storing photos in the cloud, but when it comes to the simplicity of your organization, QuickPic is still a way to switch to Android. Its overwhelmingly positive ratings show that simple work: it is a lightweight application with a modern design and connects to online storage servers. Snapseed was acquired by Google a few years ago for good reason: it has an interface that allows you to edit images on your phone very easily using an intuitive swipe-based interface. You have a powerful selective adjustment option, so you can touch a specific point and edit only a certain part of the image, not the whole. Snapseed is ad-free, runs smoothly and is probably the best way to edit photos on Android.VSCO Cam is an application from Visual Supply Company, a company known for developing some of the best video emulation filters for Adobe Lightroom and it's no wonder that this knowledge has resulted in a collection of amazing filters that can be obtained at VSCO Cam. The beauty of VSCO filters (or rather presets) is in a subtle measure of artistic effects that will help you get the right amount of retouching needed for your photo, as well as help you avoid overediting images. CamScanner is a great app if you want to make sure that all the important documents that you have are scanned and securely staying in the cloud (and securely, we mean away from thieves, maybe not so much with the NSA). CamScanner allows you to scan them and modify them so they look like high quality PDF files rather than some cheap photos taken on your mobile phone. 500px Flickr EyeEm If you're looking for a place to share photos, see other images and participate in a photo forum that would improve photography, 500px and Flickr are two of our favorites to visit. Both have new and modern apps with great visual style and both run very smoothly on Android. The third option we use is to An app that provides a more dynamic community where you can see featured photographers and find inspiration. GoPro's transition into software territory began with quick video editing apps and it's a great solution that will automatically create immersive video builds that you can easily share. Magisto is another well-known video producer who will add music and effects to your videos and bring them to life. VLC is known as a video player that can easily chew through any kind of format with ease on your desktop, and it is similarly excellent on your mobile phone. After years of testing, the app is out of beta and running solidly. Our previous favorite app, MX Player has been around for years and remains a great video player that we still use. Its swipe-based interface is adapted to touch devices: swipe left and right to move backwards and fast forwards; swipe up or down (on the right side of your device) to adjust the volume, then swipe up or down on the left half to adjust the brightness. Spotify doesn't need an introduction. The \$10 music subscription service allows you to listen to more than 20 million songs unlimited and impossible, a model that comes to replace the current buy-an-album one. You also have Spotify for free, which doesn't require a paid subscription, but introduces ads and restrictions. Sometimes you need to do something as simple as trim part of a song. We found that Lexis Audio Editor does a good job as a wave editor, allowing you to precisely trim and easily export your creations. If you're a djay, chances are you don't rely on your phone, but in case you're on the go or something goes wrong, Android has djay2. The app works great on modern phones (and not so well on slightly older devices), and when it works, it allows for many options: from slowing down and speeding up songs, to some resourceful mixing techniques. If you're into making music and want to create a few beats on the go, Nanoloop is one of our favorite tools for Android. Nanoloop combines a sequencer, synthesizer and sampler in one package, and it is a very minimal but beautifully made tool for creating electronic music. Then, if you're a music professional looking for an app to help you edit more complex projects, you can always rely on Caustic 3 and FL Studio Mobile. These complex apps will work better on a well-powered tablet, where extra screen space is a welcome addition. Signal is a messaging app that allows you to make private calls through both text messages and voice calls. It's free, supports group calls and text messages, and lets you share media. Best of all, it's open source, so make sure that all encryption is done the right way and that the governments' longer hands won't reach your private life. The server also never has access to any communication and never stores any data. Russian social network creator VK.com Pavel Durov has been officially removed from running his own product, but has focused on Telegram, a secure messaging app. The application uses encryption and although it is not as durable as Signal, it is a popular solution that seems safer than most other instant messengers. AccuBattery is a detailed battery app that gives you an estimated on-screen battery life for your device and is extremely useful for nailing which app consumes so much battery resources. It is simple, well designed and there is both a free and a paid option (we recommend getting the latter). Greenify is a simple battery management app that makes sure that no application abuses your system by taking up too much of your resources. It warns you about this and allows you to keep an eye on the battery life. BitDefender Norton Avast Let's explain one thing: if you don't go to some third-party apps or open shady files you don't know anything about, you don't have to worry about Android antivirus apps. The clever sandbox mechanism on which the platform is based makes Android very secure. However, if you have any doubts about your device, these three are the best antivirus apps around. BitDefender comes at a huge price, but it does an excellent job, while Norton is a freemium app that you can explore, and Avast is a nice third option to have. Google Drive is deeply integrated into the Android platform and it's an excellent service. We rarely use cables to transfer files these days: we just sent them to this neat cloud app with 15GB of free storage that would be enough for many people. You can also buy a \$2/monthly plan that gives you 100 GB of storage, or put out \$10 per month for 1 TB of cloud storage. Then you have Dropbox, which also offers an easy-to-use app with a 1TB storage option that costs \$100 a year. It's an equally great choice, and it's up to you to decide which one you like (we stick to Google Drive because of how it integrates with other Google products). Asus File Manager File Explorer Astro Google's new Files Go file manager app might still be in beta, but it works great, features a clean interface and comes with superpowers like the ability to quickly send large files between two devices. It also helps you easily free up space on your device. Other options worth considering are as follows: Asus File Manager app allows you to get to your files in an organized way and is free and feature-rich. Our two other go-to options are NextApp's File Explorer or Astro File Manager, which provide a slightly different design but very similar functionality. We recently learned that AirDroid, our wireless file transfer app between our laptops and phones, wasn't as secure as it should have been. Some updates have taken place in the meantime, but that was enough to move it to second place, behind the pretty excellent AirMore, which almost identical functionality, without all the downs that AirDroid added recently. LastPass keeps your password and personal information secure. Lock passwords in a secure safe place automatically fill in logins to your web browser and applications and generate new, secure passwords. With LastPass, you can remember only one password - lastpass master password. Store logins, create online shopping profiles, generate strong passwords, track personal information in photo and audio notes, and on the other hand.1 Password creates strong passwords for each site and remembers them. If you're having trouble remembering all the different passwords you use, 1Password will do it for you. The new version of the app is fully functional and will work on both phones and tablets. And if there's one thing we've been learning over the years, security is the number one problem mobile users have. With this app, you can use ridiculously complex passwords (generated by 1Password) and you can let the app remember them. A virtual private network (VPN) is a great tool for users of common sense in a variety of cases, from security to access to content that for some reason may be blocked in your region. Opera Free VPN is our favorite ANDROID VPN app because of its simplicity and unbeatable price for free for the base version. You also have a Turbo VPN as an alternative, another well-established app that will do the job well. If you are accustomed to using torrent files for any reason, Flud is probably the best BitTorrent client out there: clean, simple, no download or upload restrictions, strictly in accordance with Material Design directives. It allows you to choose which individual torrent files to download, gives you priority files and folders, and has magnet link support. We offer two options to turn your phone into a smart remote control: whether for the purpose of controlling something on your laptop/desktop, or whether your phone has an infrared beamer to control your TV or air conditioner. Sometimes laziness can feel good. 7 Minutes of training Finally, given that we have our phones always in our pockets, it is worth using them for something that will actually benefit our health: for our workouts. We have difficulty recommending a full-size gym app for phones because we think the gadget has no place in the gym where you workout, but for a light workout and as a reminder to go for a run or do those famous 7-minute workouts to excite you while working in the office, Runkeeper and 7-Minute Workout are two great apps. ESPN's TheScore Bleacher Report ESPN has introduced a completely redesigned Android app that offers a beautifully simplified user-friendly style and allows you to easily stay up to date with the latest news around your favorite sports team. Not only that, you'll get by-the-minute updates to live in-game results, as well as a news section that comes with lots of videos. The main goal of the new ESPN app is the following leagues: NFL, College Football, NBA, College Basketball, MLS, Cricket and more. If you want more results, news and analysis, TheScore stands out at first, while The Bleacher Report does very well in Two. Movements is a motion tracking application with a simple interface, but most importantly, it does not require constant clutter with it. Just run it once and it will track steps, drives, cycling and running in the background. In addition, it will also map your daily activity on the map. The fact that the app was acquired by Facebook indicates that you get an elegant and smooth experience. We all have these periods when you get sick and suddenly you find yourself taking a handful of medications to get better sooner. Medisafe's Meds and Pills Reminder will help you keep track of when these drugs are due to the simple and easy way. Clue Period Tracker is the best period tracking app and while you probably don't care if you're a dude, your girlfriend will definitely appreciate showing this useful app to her. Hopper Hopper is a cool cruising service that sends alerts when it's the right time to buy a ticket, based on algorithms that predict whether prices can rise, lower or stay sideways in the near future. However, that's not all that's in the new Hopper for Android, as it has one of the most convenient to use designs we've seen with such apps, with no unnecessary features or disruption, as well as big, easy-to-touch icons, input fields and calendars. Hopper will only feed air ticket alerts if prices to our destination have reached the lowest point and will soon rise, so check it out if you're traveling, it can save you a lot of bucks on your airline tickets. We also like Skyscanner overlooking the eyes of various flight and ticket sellers, and also includes the promise that it will give you the best price for your flight. Fashionistas, untie! Well, at least take a look at these two apps that will give you tons of cool new ideas for dressing and styling. Houzz Houzz is a great center of home design and renovation ideas with lots of paintings to help you visualize what you want to build or change before making many mistakes on your own. With a perfect record in the form of a weekly newsletter, Houzz has become our place for those times when just changing something at home can help us understand the chaos in our minds. Feedly Yahoo News Digest Google News The new Yahoo under Marissa Mayer is an interesting concoction of technology and media company, and the Yahoo News Digest app is a brilliant illustration of the direction in which Yahoo will be. The app is elegant and thoughtful if human editors presenting itself with morning and evening digests of the most important news from around the world. We love the idea of having about 10 messages for each shortcut: you can quickly scroll between leading topics, and get a sense of the ending that news junkies who would otherwise tend to spend much more time digging the news will appreciate it. If you are a person who reads news as a job or a serious hobby, there is no better way to keep up to date with everything that's going on than a full-size news reader. After the pathetic demise of Google Reader, Feedly has become the number one alternative with regular updates, a neat interface and even a premium tier offering even more features. GasBuddy Here is a useful application that is downright relevant for travelers who want to top up at the cheapest price anywhere: GasBuddy. This neat little app is especially useful in the United States where you can use it to find a gas station that offers the best deal of them all. Why? Well, if you never leave your hometown and already know all the gas stations there, probably not, for all other reasons it seems quite obvious. Duolingo brought some revolution to the acquisition of language on a mobile device. His simple, repetitive approach works well to introduce you to language in all four of his incarnations: reading, writing, speaking and listening. Duolingo currently allows you to learn Spanish, French, German, Portuguese, Italian, Dutch, Irish, Danish, Swedish and English. We look forward to a similarly simple way of learning Asian languages! Khan Academy has amassed a huge number of lessons in both text and video to help you catch all sorts of subjects: from basic math to a more complicated calculus, all explained in a system that allows you to continue only after mastering the required content. This is a great way to learn, especially for science, but it also applies to art. Khan Academy offers articles in mathematics (arithmetic, pre-algebra, algebra, geometry, trigonometry, statistics, calculus, linear algebra), science (biology, chemistry, physics), economics and even humanities with tutorials on art history, civics, finance and more. Tinder Bumble OKCupid Everyone is on Tinder these days, and what makes this simple hot or not app is a good choice for those looking for a date or maybe something more. We're not big fans of the superficial approach to people that lies at the core of Tinder, but at the end of the day it's up to you to form relationships with people. IMDb is the world's largest movie database and as such is an indispensable tool for movie lovers. Movie trailers, casts, reviews, and all sorts of movie accessories adorn the free IMDb movie app, more than enough to give it a place on this list. Tasty arrived and took over the world of cooking apps like a storm: sudden and unexpected. This is a great little app with cool videos and this is our best choice for most people. Yummly is our second favorite cooking app, and while there are many others that are equally great, we emphasize Yummly because of its amazing filters that allow you to easily discover dishes from different styles and cuisines. is a more sophisticated application with a paid layer for those who want recipes from proven chefs and with proven excellence. Then we also have a neat simple Recipe Book that also a great option. Yelp is another service that has grown thanks to excellent reviews of its users. Whether it's a gym club or a restaurant, there's a chance Yelp will help you make the right choice not only in the United States, but in most English-speaking territories. Territories.
